

PROJECT MANAGEMENT & ENGINEERED SOLUTIONS

UPS maintains the highest standards and offers one of the most extensive ranges of proficiencies in the industry. We pride ourselves in consistently delivering reliable project forecasts and performance. Our experience, competence and safety are built into all of our project management systems. In Engineering Services, we offer a complete array of multidiscipline engineering, procurement and construction capabilities; this allows UPS to offer “turnkey” projects from conception to completion. From compressor stations and natural gas processing plants to refineries and petrochemical facilities, we do it all.

SERVICE STRENGTHS

- Highly experienced project management professionals
- Solutions for EPC, downstream, midstream, industrial, construction and plant services
- Specialists committed to technical excellence and innovative solutions
- Proven planning and project controls processes
- Large knowledge base of job sequencing and budgeting

SERVICE EXPERTISE

- Fixed equipment and piping engineering services
- Full design and stress capabilities
- PE compliance
- Pressure vessel engineering: new construction, alteration, re-rate and repair
- API tank engineering
- Pipe stress analysis
- Local stress investigation
- Finite element analysis
- Project-specific equipment specifications
- Customer procurement support
- Constructability reviews
- Critical lift planning and review
- Specialty tool design
- Project engineering and management
- As-built documentation with 3D laser-scanning technology
- Dimensional control and traditional survey
- Metrology technology laser tracker solutions
